Latent Representation Disentanglement (t-SNE) Across 17 Unseen Patients

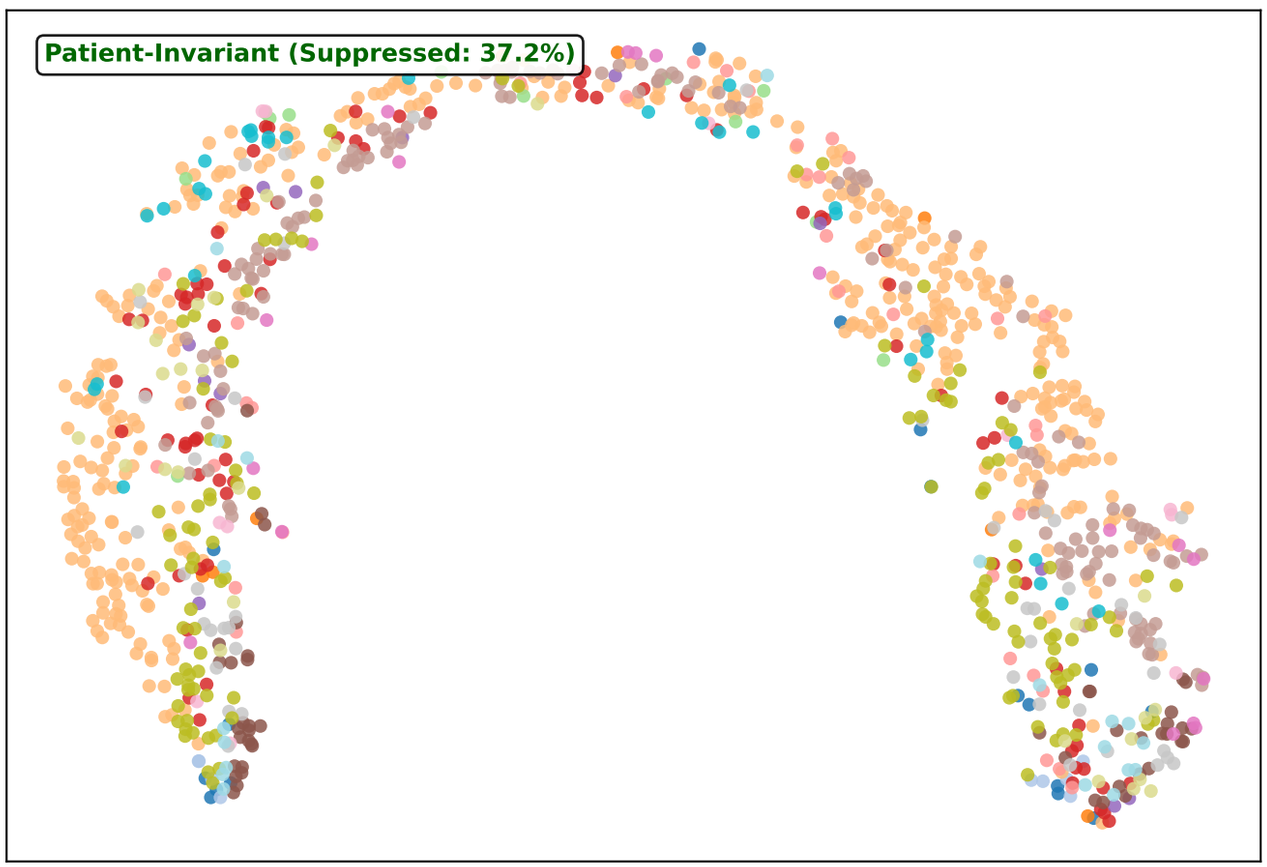

(a) Baseline t-SNE — Colored by Patient ID
(Patient Memorization / Shortcut Learning)

(b) Baseline t-SNE — Colored by Seizure State
(Confounded / Entangled by Subject)

(c) Proposed Invariant t-SNE — Colored by Patient ID
(Subject-Invariant / Blended Manifold)

(d) Proposed Invariant t-SNE — Colored by Seizure State
(Clean Disentanglement of Ictal Dynamics)
